Concepts. Definitions

Degree profile

Describes in terms of **competences** and **learning outcomes** what graduates will know, understand and be able to do by the time they have successfully completed the programme.

A set of key competences (**Generic (GC)** and **Subject Specific (SS)**) to be developed by the learners in the framework of a programme.

Should be very concise and it needs to be very clear.

Provides a tool for: **COMMUNICATION**, **TRANSPARENCY** and **RECOGNITION**

Competence

What is a **competence** according to Tuning?

- Is a broad concept
- Represents a **dynamic combination** of:
 - **Knowledge** and understanding at different levels
 - **Skills** and abilities
 - **Attitudes** and values
- Competences are used to define degree profiles
- Competences are formed in various course units and assessed at different stages.
- Some competences are **subject area related** (specific to a field of study) while others are **generic** (common to any degree programme)

Different phrasing, same meaning

Generic Competences in different contexts

- There are **16 competences which are highlighted internationally** and seen to be necessary to define any university degree.
- The 16 global competences are part of a larger list in each region, where there are **other competences** that can match in some regions and some others that are exclusively linked to a context and do not appear in the rest. (**singularity that coexists with globality**).
- The **relevance of the context** is critical. The education systems of different countries refer to various combinations of competences. Each list of generic competences is abstracted from a context in which they have meaning. When generic competences are described without context, their meaning is left unanchored, and they imply learning without context.
